

SRINIVASAN VIJAYARAGHAVAN

Lead DevOps / Site Reliability Engineer — Cloud Infrastructure, Reliability & Release Automation

Bangalore, India · +91 97910 25934 · srinivasan.shyam2000@gmail.com · srinidevops.com

U.S. Citizen · OCI Holder — Authorized to work in both the States and India

SUMMARY

DevOps/SRE engineer with 5 years owning release, upgrade, and disaster-recovery automation for a multi-tenant Azure platform of 15+ microservices. I build the pipelines, health gates, and rollback paths that decide whether a release ships — and own the recovery when it doesn't.

WORK EXPERIENCE

DevOps Engineer | Thomson Reuters Jun 2023 – Present · Bangalore, India

Own release, upgrade, and disaster-recovery automation for a multi-tenant legal platform across multiple Azure regions and environments.

Release Engineering & Upgrade Automation

- **Replaced manual upgrade runbooks with unattended Ansible orchestration** for 15+ microservices, with per-service rescue blocks and automatic rollback.
- **Gated deployments on backup integrity** — T-SQL-verified transaction-log backups, RESTORE-based rollback, and Datadog failure hooks.
- **Automated container image promotion across environments** in GitHub Actions, streaming Azure DevOps build logs into the GitHub console.
- **Built on-premises deployment automation from scratch:** Jinja2 config templates, idempotent SQL Server initialization, and pre-flight input validation.

Reliability, Disaster Recovery & Observability

- **Extended DR failover and failback to modernized microservices**, driving maintenance and active state transitions through Azure Service Bus.
- **Migrated databases and application servers across Azure regions with zero data loss**, covering restore, HA mirroring, and rollback.
- **Hardened Apache restarts with a four-condition health gate:** service state, HTTP 200, load-balancer convergence, and healthcheck file.
- **Eliminated transient-fault pipeline failures** with retry backoff (5 attempts / 2s) and defensive checks for WinRM connectivity loss.
- **Extended HTTP, TCP, and JMX health monitoring to every microservice**, with dynamic template generation and dependency-aware agent restarts.
- **Cut failed-deployment detection time** by instrumenting release playbooks with deployment telemetry, run summaries, and Teams alerting.

Platform Engineering, Security & Cost

- **Refactored multi-environment Ansible inventories into an environment-agnostic model** across 15+ microservices, removing a recurring three-place edit.
- **Closed an unrestricted-execution gap with two RBAC gate workflows**, and integrated BYOK via Key Vault and Azure App Configuration.
- **Led a jumpbox VM family upgrade through ITSM change management** to reduce compute spend across the estate.

DevOps Engineer | GraniteRiverLabs Sep 2021 – Jun 2023 · Bangalore, India

- **Built Docker build, tag, push, and deploy pipelines**, plus automated WiX installer signing and dpkg packaging in CI.
- **Enforced linting, unit tests, and PR quality gates** across GitHub repositories to raise code-review consistency.
- **Scoped AWS EC2 security groups and key-pair management to least privilege** for a .NET application.
- **Built Zigbee test automation for Project MATTER (CSA)** and a custom Windows Wireshark installer via GitLab CI.

TECHNICAL SKILLS

- **CI/CD & IaC:** GitHub Actions, Azure DevOps (REST API), GitLab CI, Ansible, Jinja2, Bicep, ARM templates, Docker
- **Cloud:** Azure — ACR, AKS, Service Bus, App Configuration, Key Vault (BYOK), Storage, Load Balancer, AzCopy, CLI; AWS — EC2, Security Groups
- **Reliability & SRE:** DR failover/failback, SQL Server mirroring (HA), backup and restore verification, health-gated restarts, automated rollback, ITSM change management
- **Observability:** Datadog, Pingdom, HTTP/TCP/JMX synthetic checks, deployment telemetry, Teams alerting
- **Platforms & Data:** Windows Server, RHEL/Ubuntu, Apache HTTPD, Tomcat, SQL Server (T-SQL, backup/restore, mirroring), Solr, WinRM, Akamai
- **Languages:** Python, Bash/Shell, PowerShell/Batch, YAML, SQL, C/C++
- **Security:** RBAC gates in CI, centralized secret management, BYOK encryption, S/MIME commit signing, vulnerability scanning

EDUCATION

B.E., Electronics and Communication — MIT, Anna University, Chennai, India · Aug 2021
